

“Steering Accurately into the New Year”

Dave’s Truck Repair, Inc. is Entering the Front End / Wheel Alignment Business for Heavy Duty Trucks, Buses, RV’s and Trailers

Dave’s Truck Repair, Inc. is very excited to announce that they are expanding their extensive list of Services to include Front End / Wheel Alignments effective January 2, 2008. We have recently purchased a brand new “State of the Art” Hunter 811T Alignment System, which uses a powerful computer, Microsoft Windows XP and exclusive WinAlign HD software to deliver alignment features specifically for Heavy-Duty truck, trailer and bus applications.

“Poor wheel alignment, for trucks, buses, dollies and trailers will not only cause more rapid and/or uneven tire wear but will also cause less efficient fuel utilization”, says Dave Proulx, Owner of Dave’s Truck Repair, Inc. “Given today’s tire prices and especially given today’s soaring fuel prices, it makes tremendous sense to ensure that all fleet vehicles, trucks buses and trailers alike, are in alignment”, he adds. This new equipment supports more than 50 heavy-duty axle configurations including dozens of truck/trailer, bus and dolly manufacturer configurations. The associated DSP506TXF Sensors electronically and accurately measure camber, caster, S.A.I (Steering Angle Inclination), thrust angle, scrub angle and front and rear toe.

Dave’s Truck Repair, Inc., located at 1023 Page Blvd. in Springfield, MA has been in business for almost 21 years and is a major area supplier of truck, trailer, bus and RV repair services, sales and parts. “Our slogan is ‘Keeping Your Vehicles On The Road’ and we pride ourselves on doing just that” says Dave. “We believe that this additional service line will help us to serve our Customers more completely and brings us one giant step closer to ‘One Stop Shopping’”.
